

Exhibition in Spain: QUNDIS pushes internationalization

Erfurt/Madrid, 19. February 2019

At the CLIMATIZACIÓN Y REFRIGEERACIÓN exhibition in Madrid, QUNDIS GmbH presents its intelligent measuring devices and systems for the collection of heat and water consumption. The measuring expert will also show its latest product updates for remote meter reading, which will become mandatory throughout Europe in the near future due to the EED amendment.

The recently adopted EED reform with far-reaching changes from 2020 for consumption metering in all new buildings challenges architects, engineers, owners, administrators and installers: As visitors of the CLIMATIZACIÓN Y REFRIGEERACIÓN international energy exhibition, they can obtain comprehensive information on the subject from 26 February to 1 March 2019. The new Head of Sales at QUNDIS GmbH, Rafael del Granado, will bring the Qwater water meter, the Qcaloric heat cost allocator and all other system components to present at the trade fair. They already comply with tomorrow's EED requirements today. The devices can be remotely read 365 days a year. Access to the apartment is no longer necessary. Administration and control function cloud-based via the web application QUNDIS Smart Metering Platform.

QUNDIS also has a good reputation with Managing Director Volker Eck as the newly elected member of the OMS Group Management Board and as an open system supplier of intelligent measuring devices and systems. The products, labeled with "Made in Germany", are based on the M-Bus standard and are compatible with the OMS standard as well as with the "KNX" international communication standard for building technology.

Visit QUNDIS at the international trade fair CLIMATIZACIÓN Y REFRIGEERACIÓN in Madrid in hall 4, stand E02!

About QUNDIS:

QUNDIS GmbH is part of the noventic group and is one of Germany's leading suppliers of measuring devices and systems for the collection of heat and water consumption. More than seven million homes in over 30 countries are already in use with QUNDIS devices – labeled "Made in Germany". QUNDIS systems stand for user-friendliness, quality and technical compatibility. QUNDIS invents and produces with its company headquarters in Erfurt and can look back on almost 30 years of corporate history.

About noventic group:

The noventic group is a group of companies operating throughout Europe for the climate-intelligent control of real estate with measuring and sensor devices via digital communication infrastructure and data management to various housing applications. The noventic group increases the energy efficiency of buildings through the digitalization of processes and with highly available data infrastructures. This not only improves their economic efficiency, but also contributes directly to climate protection. With the know-how of its strong, independently operating subsidiaries QUNDIS, KALO, SMARVIS, ikw and KeepFocus as well as its strategic participation in Power Plus Communications, the noventic group generated revenues of more than 200 million euros across Europe in 2017/18 with 750 employees. www.noventic.com

About OMS-Group:

The OMS-Group e. V. is a 58-member interest group of companies from 15 countries worldwide. With the Open Metering System (OMS) specification, the OMS-Group has developed an open, manufacturer-independent, interoperable standard for the communication of consumption meters for electricity, gas, water and thermal energy. Intelligent OMS meters are a prerequisite for the operation of smart grids and smart buildings and the optimal integration of renewable energies such as wind power or solar energy. Further information on the standard and the representation of interests can be found at www.oms-group.org

About CLIMATIZACIÓN y REFRIGERACIÓN:

The Climatización y Refrigeración is one of the leading trade fairs for air conditioning, ventilation, refrigeration and heating technology in Europe. More than 600 manufacturers from over 65 countries present their latest products to around 50,000 visitors. The trade fair is attended mainly by architects, engineers, installers and retailers, as well as wholesalers, to learn about the innovations and trends in the sector.
